

Kevin Yameogo

Queens, NY | (929)-231-4873 | yameokevin234@gmail.com | [Portfolio](#) | linkedin.com/in/kevin | github.com/kevin

Specializing in full-stack development and AI-integrated systems

EDUCATION

St. John's University

Bachelor's of Science in Computer Science

Queens, NY

Expected Graduation – May 2026

RELATED COURSEWORK

Advanced Data Structures and Algorithms, Object-Oriented Programming, Database Management (SQL), Web Development, Operating Systems

PROJECTS

ADAPT AI | *Next.js, TypeScript, React, OpenAI GPT-4, Office.js, Tailwind CSS* Feb 2026

- Built an AI-powered PowerPoint add-in using Next.js 15, TypeScript, and Office.js that integrates OpenAI GPT-4 to generate real-time executive insights, speaker notes, and research suggestions directly within PowerPoint
- Engineered a REST API endpoint using Next.js App Router to handle audio transcription and slide content analysis, enabling voice-driven slide generation via Whisper + GPT-4
- Implemented a persistent Notes Library with localStorage and multi-format export (PDF, Word, Excel) using jsPDF, docx, and xlsx, allowing users to curate and share presentation insights
- Delivered a project with cross-platform compatibility (Mac and Windows) by architecting multi-layered fallback strategies for Office.js API limitations

VCRTS — Vehicular Cloud Real-Time System | *Java, Swing, MySQL* Dec 2025

- Architected a distributed Vehicular Cloud Computing platform using a multi-threaded TCP socket server enabling real-time job scheduling across networked idle vehicles
- Implemented a fault-tolerant job recovery system with checkpoint-based state preservation, automatically reassigning interrupted jobs to replacement vehicles with zero data loss
- Designed an MVC-structured desktop application featuring three role-based Swing GUIs (Client, Vehicle Owner, VC Controller) with a FIFO scheduling queue supporting configurable redundancy levels
- Engineered a MySQL-backed persistence layer via a dedicated DatabaseManager module handling CRUD operations for users, jobs, vehicles, and checkpoints on application startup

PlanVoy | *React, FastAPI, PostgreSQL, Redis, OpenAI GPT-4o, Docker* May 2026

- Designed a GPT-4o prompt engineering pipeline with schema-constrained JSON outputs, enabling reliable generation of long-form, structured itinerary data (4K+ tokens) across recommendations, logistics, and contextual travel guidance
- Implemented a Redis caching layer with SHA-256 hashed keys that serves repeated itinerary requests from memory, reducing GPT-4o API response time from 4s to under 50ms (95% latency reduction) for cache-hit queries
- Offloaded itinerary email delivery to FastAPI background tasks, reducing API response time by 97% (from synchronous SMTP blocking to an immediate HTTP 202) while maintaining reliable async delivery via PostgreSQL trip lookups
- Containerized the full application across 4 Docker services with health checks and volume persistence, reducing local environment setup from multi-step manual installs to a single docker compose up command

EventoAll | *HTML, CSS, JavaScript, Nodejs, Vercel* Aug 2024

- Developed an interactive event information system that enables users to search for events across 30+ countries using the Ticketmaster API
- Employed modular JavaScript functions for code organization, improving maintainability and readability
- Designed a responsive layout that adjusts to various screen sizes, ensuring accessibility across devices
- Integrated a serverless function in Vercel to fetch data from the API and send it directly to the client for seamless interaction

TECHNICAL SKILLS

Languages: Java, Python, Typescript, JavaScript, HTML/CSS

Frameworks: Next.js, React, Node.js, FastAPI

Developer Tools: Git, Github, VS Code, PyCharm, Eclipse, Vercel, Docker

Libraries: React query, pandas, NumPy, openAI, Redis
